

## HTBS

Horizontal band resaw suitable for autonomous operation or integrated behind a pre-planer.

HTBS is used for splitting of single or batched laminated beams. Using double width laminations is an economic and quick way of increasing the productivity of a glulam press and most efficient way to produce thinner glulam beams. Double glued beams are split with the high quality bandsaw and planed to finished products.

### Highlights:

- For splitting of glulam
- Excellent cut quality
- Roller conveyor on infeed
- Side pressure rolls on outfeed
- Strong and fast
- PLC control for integration in automated lines

## Technical data

### HTBS 700 / 1400

 Cutting width	700 / 1.400 mm
 Band wheel diameter	1.250 mm
 Feeding speed	3 - 15 m/min

### Machine Models

- HTBS 700
- HTBS 1400
