

Capability Statement

LEDINEK

- **Planing, Profiling**
- **Finger jointing**
- **Engineered Timber**
- **Special**
- **Automation solutions**

Trendsetter and global innovator

With a high level of multidisciplinary skills and knowledge, with our passion to invention and ingenious techniques, we shape the wooden world today. We take our own way to the top, we believe and trust in what we do.

As experts in complex processing of massive wood, planing and profiling, finger jointing and engineered timber, we tackle the challenges of modern lifestyle and ensure the state-of-the-art technology of our products – from product design to delivery and installation. On the basis of our sporting spirit we never give up, but search for the best solution for each single customer.

Building on the long tradition of a family business, we are proud of the presence of our unique woodworking machines, complete lines and even plants complexes on all continents of the global market.

The vision that we follow is to be a global innovator and trendsetter of wooden industry today and in the future.

INNOVATIVE

Innovation has always been the prime motive behind our new machines.

We dare to challenge the future. We are proud of this spirit of our engineers and bold enough to follow this path!

POWERFUL

Be inspired to go faster, to go further, to break records Again, ... and again.

This is the formula of winners. The new generation of Ledinek machines has the power and the quality to put you on top!

DURABLE

Our machines are built to last longer, to perform with ease under toughest conditions.

A load too heavy will break a weak link, therefore we give our machines a strong backbone which will not allow them to fail!

Welfare of society and the environment

It is our corporate responsibility to behave ethically and contribute to the well-being of the local environment and society at large.

We believe in the green economy, in giving back to the community and in our duty to support good initiatives.

Our History

1875 – 1966 Cooperage as the family craft of several generations

Cooperage was the family business of several generations of the Ledinek family from Maribor. The grandfather of the present owner and manager of the enterprise Pavel Ledinek BSc (ME), initiates the cooperage craft.

1956 – 1992 The establishment of the production business and entering international markets

In 1956, at the age of 17, Pavel Ledinek made his first machine for the needs of the cooperage.

It soon turned out that such innovative solutions are required on the market and so work and development were focused on machines for working of solid wood.

From 1992 till today – TRENDSETTER & INNOVATOR

Original and innovative approaches to finding solutions, creative thinking focusing on the needs and requirements of the profession as well as consistent and optimal implementation resulted in major technological development and winning the global market over last 20 years.

Planing, Profiling

Premium planing technology by LEDINEK.

A full range of industrial moulders and planers. Enhanced with innovative ideas; powerful not only in terms of immense motor power but also sophisticated software and clever setup; robust in design and of the highest quality components; topped off with years of experience.

Machines and entire mills, built to produce and built to last.

Finger jointing

A bond for life.

High capacity single piece milling and pressing solutions for precise machining geometry and perfect application of abundant force to all different workpieces. Finger jointing machines and lines are a masterpiece of the woodworking industry. A collection of processes that form a lifelong bond – a bond that holds together our homes, a bond we depend upon. Therefore, only the best is good enough.

Engineered Timber

Strong and innovative pressing solutions for glulam and cross laminated timber.

Excellent and innovative presses for straight, curved, stepped and blockhouse beams and for single layer or cross laminated panels. From commissioning batches to high volume standard sizes, always highly adaptable and productive. Optimized for capacity and with different levels of automation, up to a fully automated press for curved beams.

Our presses are always somewhat different; they ease your workload, improve your products and expand your production capabilities.

Special

Dekoplan, Rotoplast, Parquet machines, Cooperage machines.

Innovation has always been the motivating force behind our planers, finger jointing lines, presses and automation solutions. But nowhere else is this more visible than within the range of our special machines.

Over the years, we have developed a range of specialized solutions. Sometimes as unique pieces, sometimes as very popular product families. Always in touch with our core business and deriving from our knowledge but at the same time expanding our horizons and implementing new ideas.

This worked both ways, just as we incorporated our standard parts in specialized machines, we have also used new experience and new solutions on our core products.

Automation solutions

The Ledinek offers complete solutions in machine and plant engineering including design, construction, manufacturing, assembly, wiring, software, commissioning and training of the equipment at customer's site.

We offer you our production concepts for planer mills, glulam timber, solid construction timber, duo-, trio beams, block house elements, profiled timber, laminated panels, window scantlings and more. A long experience and know-how in the field of machine and plant engineering are a guarantee for customer oriented processing of special requirements and customized products from project planning to commissioning of the equipment and training of personnel.

Previous significant projects

Södra Timber AB - Sweden - 2019
Complete CLT production Facility

Splitkon - Norway - 2019
Complete CLT Manufacturing Facility

A. Baumgartner GmbH - Austria - 2019
Complete GLT and KVH production line

XLam Mayflower Group - Australia - 2018
Turnkey CLT production line

S.A.S. Piveteau Bois - France - 2018
Complete CLT production line

Cypress Sunadaya Co., Ltd. - Japan - 2018
CLT production line

Noritec Holzindustrie GmbH - Austria - 2018
High speed finger jointing machine

F.P.H.U „ODNOVA” Jacek Smętek - Poland - 2019
Complete glulam Manufacturing Facility
