

LEDINEK

INNOVATIVE | POWERFUL | DURABLE

TRENDSETTER AND GLOBAL INNOVATOR

Ledinek Engineering is one of the world's leading manufacturers of machines and plants for solid wood processing. Established in 1992, the company stems from a rich family tradition of entrepreneurship and is based on more than 55 years of experience in mechanical engineering. The company has developed a diverse portfolio of innovative, tailor-made solutions with a global track record of success.

With a high level of multidisciplinary skills and knowledge, with our passion to invention and ingenious techniques, we shape the wooden world today. We take our own way to the top, we believe and trust in what we do.

As experts in complex processing of massive wood, planing and profiling, finger jointing and engineered timber, we tackle the challenges of modern lifestyle and ensure the state-of-the-art technology of our products – from product design to delivery and installation. On the basis of our sporting spirit we never give up, but search for the best solution for each single customer.

Building on the long tradition of a family business, we are proud of the presence of our unique woodworking machines, complete lines and even plants complexes on all continents of the global market. The vision that we follow is to be a global innovator and trendsetter of wooden industry today and in the future.

PASSION FOR INNOVATION

From the outset, our vision to go beyond creating machines and develop complete production lines has not only come true but has also proven to be the right strategic direction.

Over the years, we have made significant progress, gained valuable experience, and grown into a company that today stands as a global leader—setting trends and pioneering cutting-edge technologies. What makes Ledinek truly stand out is the unique combination of advanced engineering and human dedication. Our machines and solutions are designed for exceptional performance and long-term reliability, but it is the passion, commitment, and pride of our employees that transform these innovations into real value for our customer-partners.

This strong foundation is what makes us the right partner for our clients. As we continue to grow, we are focused on nurturing these qualities, passing them on to younger generations and new colleagues joining our ranks. Together, we will remain strong—as a team supported by individuals, and as individuals supported by a collaborative team.

Looking ahead, we have a busy road ahead of us. In addition to ongoing development, we are making significant investments to keep pace with the times, boost productivity, and enhance quality. Our products play a vital role in transforming wood into sustainable, high-quality materials, and we are committed to constantly innovating to offer the market superior solutions.

I would like to express my sincere gratitude to all our partners and colleagues. Your trust, hard work, and contributions are what have shaped Ledinek's success and will continue to drive us forward. Together, we are destined for success.

Gregor Ledinek - CEO, Ledinek Engineering

INNOVATIVE

Innovation has always been the prime motive behind our new machines. We dare to challenge the future. We are proud of this spirit of our colleagues who are bold enough to follow this path!

POWERFUL

Be inspired to go faster, to go further, to break the record. Again, ... and again. This is the formula of the winners. The new generation of Ledinek machines has the power and the quality to put you on top!

DURABLE

Our machines are built to last longer, to perform with ease under toughest conditions. A load too heavy will break a weak link, therefore we give our machines a strong backbone which will not let them fail!

TIMELINE

Mid-1930s

A Tradition of Craftsmanship

Woodworking was a family craft passed down through several generations of the Ledinek family.

1967

The Birth of a Family Business

Pavel Ledinek, founder of the Ledinek brand, begins manufacturing his first wood-working machines.

1986

Growth and Innovation

Opening of the first production facility in Hoče, as machine development advanced through innovative ideas.

1994

International Recognition

The innovative Rotoles planing technology receives the prestigious Challenger Award at IWF Atlanta.

2012

A Global Leader

Gold Award for Best Slovenian Innovation. Marked by the expansion in designing and manufacturing high-tech production lines.

LEDINEK CAPABILITY STATEMENT

Ledinek Engineering is one of the world's leading manufacturers of machines and plants for solid wood processing. All our premium technology is a product of our own know-how and production. Our partners include leading manufacturers of electronic and other equipment, along with all major players in the wood processing industry.

CORE COMPETENCIES

PRODUCTS:

Heavy-duty tailor-made machines and lines:

- Planing & profiling
- Finger jointing
- Engineered Timber
- Automation
- Special machines

SERVICES:

- Consulting
- Operator training
- After-sales activities
- Production ramp-up support

DIFFERENTIATORS

- Innovative state-of-the-art technology
- Full-range supplier
- Custom - made solutions
- Pilot projects

- More than five decades of experience in machine construction
- Single point of contact
- Family owned business

PAST PERFORMANCES

2025 – CURRENT:

- Spearhead Glulam, 10.000 m³/y/shift
- Moelven Edanesågen, planing line 120 pcs/min
- Rigidply Rafters, glulam 120.000 m³/y/ 2 shifts
- Lehmann Holzwerk AG, CLT in glulam, 45.000 m³/y
- Charpentres FOURNIER, glulam, 27.000 m³/y

2020 – 2024:

- Mayr-Melnhof Holz Leoben, CLT plant, 130.000 m³/y
- Arboreal, CLT, glulam, 50.000 m³/y
- Södra Skogsägarna, CLT, 100.000 m³/y
- Stora Enso, finger-jointing, 120.000 m³/y
- Schilliger Bois, CLT, 80.000 m³/y
- SmartLam North America, glulam, 100.000 m³/y

CERTIFICATIONS:

ISO 9001

ISO 14001

PLANING & PROFILING

Ledinek offers a full range of high-performance industrial moulders and planers, designed for maximum efficiency and precision. Engineered with innovative technology, these machines combine immense motor power with advanced software and intelligent setup. Built for durability and reliability, they feature top-quality components and a robust design, backed by decades of industry expertise.

Plane
Your
Future

FINGER JOINTING

Ledinek's advanced single piece milling and pressing solutions ensure precise machining geometry and the optimal application of force for a wide range of workpieces. Our finger jointing machines and production lines are the pinnacle of woodworking technology—the core of every lamination plant. These processes create bonds that last a lifetime—bonds that strengthen our homes and support the structures we rely on every day.

A
Lifelong
Bond

ENGINEERED TIMBER

Innovative and high-performance pressing solutions for glulam and cross-laminated timber. Our advanced presses handle straight, curved, cambered, and blockhouse beams, as well as single-layer and cross-laminated panels. Designed for adaptability and productivity, they accommodate everything from custom batches to high-volume production, offering optimized capacity and automation options ranging from semi-automated to fully automated systems.

AUTOMATION SOLUTIONS

With extensive expertise, Ledinek delivers customer-focused solutions tailored to specific needs. From design and planning to manufacturing, commissioning, and staff training, our commitment to quality and innovation ensures exceptional results and lasting success.

*Optimization starts with
Automation!*

QUALITY YOU CAN TRUST We Partner with Industry-Leading Suppliers

At Ledinek, quality is our top priority. Our commitment to excellence drives us to work exclusively with the most reputable suppliers. When it comes to installation components and material procurement, we rely on industry leading suppliers and manufacturers. Through these collaborations, we develop reliable and innovative solutions that meet our customers' expectations.

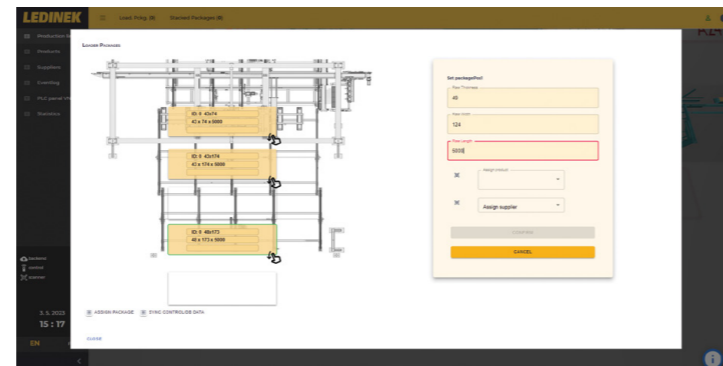

PC PROCESS CONTROL

We offer system solutions with Siemens Simatic S7 control systems for individual machines with or without HMI as well as for networked plants with multiple control points.

We use Profibus, Profisafe, Profinet, Ethernet, Ethercat and other networks. HMI operating systems are all individually programmed and made-to-measure. Large size Touchdisplays support the enhanced visualization of process control and make the operation of the most sophisticated processes as easy as possible.

PLC control and MES systems are essential in the development of modern automation concepts.

INDUSTRIAL PLC CONTROL

Production planning and control system for Engineered Timber production. ERP data management, raw material warehouse management, finished goods warehouse management, production planning and optimization, package creation, interface to enterprise resource planning, interface to other providers.

SPECIAL

Exploration drives our innovation and over the years, we have developed a diverse range of specialized solutions like Dekoplan, Rotoplast, Parquet machines, and Cooperage machines.

We design both custom-built solutions and widely adopted product families, always staying true to our expertise while expanding possibilities. By integrating standard components into specialized machines, we create advanced solutions that not only enhance efficiency but also redefine industry standards.

*Built on Experience,
Driven by Innovation!*

UL CERTIFIED PANEL BUILDER

Ledinek Engineering designs, builds, and programs control panels for a wide range of industrial applications that need to meet stringent UL 508A standards.

Each project exemplifies our dedication to precision engineering, strategic design, and superior craftsmanship. Our equipment is either custom-built or designed to specification, is UL 508A certified, and comes with comprehensive documentation. We also offer systems integration, installation, and field services to support our equipment.

GLUE APPLICATION

AUTOMATIC APPLICATION SYSTEMS FOR 1C AND 2C ADHESIVES

Complete surface glue application solution for industrial GLULAM production lines, consisting of heavy-duty lamella feeding and guidance systems with integrated automatic glue application systems.

- Precise symmetrical surface application regardless of the lamella width and curvature
- Exact glue quantity spreads at speeds of up to 400 m/min and up to 620 mm lamella widths

AUTOMATIC APPLICATION SYSTEMS FOR 1C AND 2C ADHESIVES

Complete surface glue application systems for different Ledinek CLT presses, a warranty for industrial production quality of standard and narrow CTL panels.

- Exact glue quantity spreads at speeds of up to 150 m/min and panel widths of up to 3.600 mm
- Heavy-duty, robust and with almost no maintenance

SIGNIFICANT PROJECTS

REFERENCES

AFTER SALES ACTIVITIES

At the Ledinek service department, we ensure the reliable operation of our customers' machines and production lines. We are a well-coordinated team that understands its responsibilities and quickly adapts to the needs in the field. Strong relationships with our customers are the foundation of successful cooperation, as mutual trust is essential for delivering high-quality and efficient service.

Thanks to many years of collaboration with numerous clients, some environments have become like a second home to us. We understand that a project does not end with installation – it continues through comprehensive after-sales support. Our responsiveness, expertise, and dedication are often crucial for an uninterrupted production of our partners.

We provide our customers with complete after-sales support.

- Regular on-site maintenance and inspection
- Urgent on-site service
- Technical support
- Spare parts
- Operator training
- Remote service
- Repairs
- Overhauling and modernization

OUR LATEST INNOVATIONS

GLUE APPLICATION

Complete surface glue application solution for glulam and CLT production lines.

CAMBER PRODUCTION

Fully automated system.

LARGEST CLT PLANTS

We have just introduced a solution for a new concept of buildings.

X-FORM, XE-PRESS, XT-PRESS, XS-PRESS

New concepts for new markets.

Z-PRESS SUPER

For CLT production on a higher technological level.

KONTIZINK

The heart of every major finger jointing production.

STRATOPLAN

A new generation for all speeds.

EQUIPMENT

A complete range of equipment: from unloading of packages to stacking of CLT walls.
